AUTOSTRIPPER® UNIT

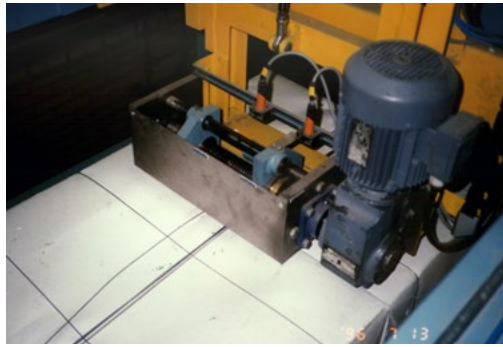

Automatic Dewiring for Pulp Bale Units

AutoStripper® is a line of products for Pulper Feeding equipment which includes automatic dewiring for all types and sizes of bales.

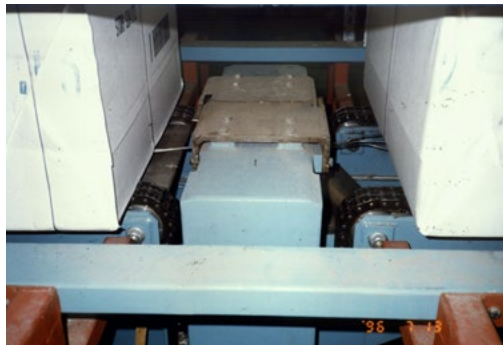

The AutoStripper® Unit is specifically designed for dewiring of market pulp bale units in pulper charging lines. AutoStripper Unit mainly consists of a cutting unit, a pair of wire holding arms, a wire winder and a belt conveyor to bring the coil to the scrap bin. The closed design assures that no wires with spring back can cause accidents.

The AutoStripper® Unit is fully self-contained and can easily be integrated in existing pulp bale lines without major re-build.

The cutting unit operates from the top. To avoid contamination of the pulp no hydraulics are used for cutting.

The wires are firmly held by the holding arms while being wound into a coil.

The scrap coil before being conveyed to the bin.
