AUTOSTRIPPER® WIRE COILER

Wire Coiler

AutoStripper® is a line of products for Pulper Feeding equipment which includes automatic dewiring for all types and sizes of bales.

The Wire Coiler is an aid for manual removal of wires around pulp bale units or waste paper bales. It's easy to install and requires only a pneumatic connection for the pneumatic motor.

After cutting the wires by hand, the operator puts the wires into the coiler, closes the cover and the coiling starts. When complete, the motor stops and the cover can be opened and the coil removed.

Typical wire length is 7 meters. The coiling of 7 meters will take approximately 30 seconds. The Wire Coiler will coil all units' wires simultaneously.

The Wire Coiler can also be equipped with electrical motor.

Technical data

Dimensions: 380x550x950 mm

Power: 2.4 kW

Weight: approx. 175 Kg
